## **New Eaton 3S UPS Protects Home Computers and Office Equipment in Style**

**MORGES, Switzerland** ... Diversified industrial manufacturer Eaton Corporation has today announced a new UPS product, the Eaton 3S, that offers affordable and reliable protection against the most common power quality problems for office and home computers. The attractive design and glossy finish of the Eaton 3S allow it to fit easily into any modern office environment.

The Eaton 3S UPS protects computer equipment from the most critical electrical problems, including power failure, sags and surges. It also covers peripherals, such as printers, using a transformer. The new compact offline UPS is available with six French or Schuko sockets, or with eight IEC sockets.

In terms of appearance, the 3S is more modern and appealing than its predecessor, the Eaton 3105 UPS. "We have paid special attention to the design of the Eaton 3S," says product manager **Christophe Jammes** at Eaton's Power Quality division.

"The UPS is aimed at homes and small offices, and this is why we wanted to make it look nice and polished – more suitable for such environments."

The power ratings of the Eaton 3S have been upgraded from those of the Eaton 3105, to 550 and 700 VA, matching the current market requirements. The 3S also features data line protection and USB connectivity.

- more -

Implementing the 3S is very easy as it automatically integrates with Windows, Mac and Linux operating systems, so no drivers need to be installed. This ensures that the 3S works seamlessly with these major operating systems' power management. A replaceable battery also helps to extend UPS service life. For advanced users, the 3S can also be monitored by Eaton's power management software.

The 3S is available throughout the EMEA region now.

Eaton's Electrical Sector is a global leader in power distribution, power quality, control and automation, and monitoring products. When combined with Eaton's full-scale engineering services, these products provide customer-driven PowerChain Management<sup>®</sup> solutions to serve the power system needs of the data center, industrial, institutional, public sector, utility, commercial, residential, IT, mission critical, alternative energy and OEM markets worldwide. PowerChain Management solutions help enterprises achieve sustainable and competitive advantages through proactive management of the power system as a strategic, integrated asset throughout its life cycle, resulting in enhanced safety, greater reliability and energy efficiency.
